## **3. DATASET ABSTRACT**

3.1 Abstract of the Dataset  
The American Community Survey (ACS) is the new source for detailed demographic, social, economic, and housing characteristics because the Census Bureau is discontinuing the decennial long-form sample in the 2010 Census. The American Community Survey (ACS) 2006-2010 Data tables in STICS have been derived from ACS 2006-2010 Block Group – level Summary File (for more information [click here](#)). Two types of files are provided for every STICS jurisdiction: 1) Estimates and 2) Sampling Error. The Census Bureau provides a [research handbook](#) to better understand and use the ACS 2006-2010 database.

3.2 Keywords for the Dataset  
socioeconomic, economic, population, age, racial and ethnic compositions, income distribution, block group, american community survey,

## **4. OBJECTIVES AND INTRODUCTION**

4.1 Program Objective  
Special Projects (SP) is one of seven Divisions within the Office of Management and Budget of the National Ocean Service (NOS). This mission of Special Projects is to promote the NOS coastal stewardship mission by providing NOS and its partners with integrated approaches to planning and management, a national assessment capability complementary to other NOS programs, and an innovative program of information synthesis and dissemination.

## 4.2 Dataset Objective

## 4.3 Background Discussion

The entire ACS 5-year Summary File down to the block group is available in comma delimited text format on a set of DVDs provided by the U.S Census ([acso.dvd.order@census.gov](mailto:acso.dvd.order@census.gov))

## 4.4 Summary of Dataset Parameters

A detailed [ACS 2006-2010 technical documentation](#) of the summary file is available from the U.S. Census Bureau.

In STICS, the common variables that are available for the data aggregated by selected jurisdictions are shown below.

## 6. DATA ANALYSIS AND MANIPULATIONS

6.1 Name of New or Modified Values  
N/A

6.2 Data Manipulation: Description

The 2010 Census Block Group polygons were imported into a GIS system to assign these polygons to political, place-based management program boundaries, and watershed/other jurisdictions. Estimates were obtained through a GIS overlay operation of Census Block Groups with all boundaries or study areas of interest. Block Groups that fell partially in the areas of interest were prorated by area to be included in the estimates (**block group area proration methodology**). The ACS 2006-2010 demographic variables data of block groups were then merged with the 2010 block group file containing the proration factors, adjusted by the proration factors, and then summarized to the study areas of interest. The exception of this process is County and State level estimates which were obtained by summarizing the ACS 2006-2010 demographic variables by the existent appropriate geography code in the file associated to each Census Block Group data. For description of jurisdictions or geographies used in STICS, refer to [http://coastalsocioeconomics.noaa.gov/coast\\_defined.html](http://coastalsocioeconomics.noaa.gov/coast_defined.html).

All data manipulation was done using the Statistical Analysis System (SAS) software. The data are kept as SAS files and exported out as ASCII tab delimited format for users' accessibility in the Download section of STICS.

## **9. QUALITY CONTROL AND QUALITY ASSURANCE**

9.1 Measurement Quality Objectives  
These data are reported in a separate file.

9.2 Data Quality Assurance Procedures  
Data estimated for counties and states compared well with data reported in the U.S. Census Bureau site. ACS 2006-2010 data estimated in other STICS geographies of interest (ex. watershed) were compared against data estimated for the same geographies of interest when using Census 2010 estimates. The differences found were in the range of 2% difference.

9.3 Actual Measurement Quality  
All of the data reported in these data files met the QA specifications.
